THE USE OF MODERN COMPUTER PROGRAMS IN TEACHING ENGLISH IN SCHOOLS

Master student of the English faculty of SamSIFL: Masudova M.D.,
Scientific supervisor: Sulaymonova N.J.

Annotation: We will examine concepts for easy English grammar learning, the implementation of English vocabulary, particularly through actions in teaching verbs, Listening Comprehension, and the utility of English-learning mobile apps in this post. We can also talk about how new computer programs can be used to teach English in schools.

Keywords: English, schools, Listening Comprehension, mobile applications, vocabulary, modern computer programs.

As you may be aware, it is vital to consider the kids' age and psychological state when teaching a foreign language. This needs extra caution, especially when teaching young children a foreign language. This issue is equally subject to faith in the decisions of our fellow citizens, as when teaching a foreign language to first-graders, no mathematics material is provided.

10. Clearly set the goal.

Because language learning is such a long and arduous process, anyone who begins it without a clear goal in mind will never succeed. The more serious the goal you set for yourself, though, the faster and more successfully you will learn the language.

2. The basis of the language is repetition.

Without constant repetition, learning a language is impossible. You can memorize 10 new words per day, but you will lose them if you do not repeat them within 1-2 days. One of the most effective ways to do this is to make flash cards (flash cards). If not, you can take advantage of the areas where your eyes naturally fall. Personally, I would have written and pasted the new words I learnt on a small piece of paper on the computer monitor and on the bed board.

3. Communicate.

Another benefit of studying languages with one or more partners is that it encourages partners to compete for self-esteem. You may form a group with a friend from your neighborhood or school. You will make every effort to remember the words so that you do not fall behind your partner if you commit to study at least 30 new words each week and meet on Sunday to test each other.

4.. Use your smart phone effectively.

Learning English is not easy. This necessitates that you have a clear goal in mind, that you constantly repeat new phrases, that you communicate when the opportunity arises, that you adapt the English learning process to your life, and that you use technology effectively.

Learning English is really popular right now, and there are a variety of technology options. Here are the most practical and helpful uses in international language studies.

To help you extend your vocabulary and apply what you've learned, the software can be used as a standalone app or as part of an English language course.

1. Lingualeo

The app offers both a well-known service and a variety of training courses. This activity helps students improve their vocabulary, reading, writing, and listening skills. The exercise is based on gamification, which encourages students to pursue their goals without losing interest in English.

2. Duolingo

The software teaches English in the form of a game by investing a few minutes each day. Work your way up to grammar tasks by starting with simple verbs and sentences.

3. Polyglot 16

Dmitri Petrov, a well-known polyglot and author of the same-named course, created this program. According to him, the system allows you to grasp basic English in only 16 classes. If you set aside at least 15 minutes every day, you will master the rules of grammar, memorize the required vocabulary, and learn how to construct phrases for free communication.

4. Memorise

Memorise is another game-like tool that makes learning English fun while also making it easier to remember new words. The curator of the Memorise adventure realm will take you on a journey through a mysterious place. On this adventure, you will face mysterious missions and enemy agents. This method will provide you with excellent assistance.

5. BBC Learning English

This is the official BBC application, in which materials for English study were gathered from many broadcasting corporations' radio and television stations. In addition to the audio content, there are various worksheets to help you master grammar principles, create phrases, and absorb new terms.

6. Easy ten

With this program, you will memorize 10 new words by completing the lexical exercise that is presented every day. The program does not require a significant amount of time; 20 minutes per day will sufficient. The program contains around 20,000 words, as well as additional workouts to help with pronunciation. Break the new words down into relevant groups for added motivation, and keep track of your progress.

7. Words

This app did not happen to be among the best in the App Store's "Education" category by accident. The database of the application contains over 8,000 words and can be utilized offline. The software adapts to the user's abilities and determines the phrases that were previously difficult in the activities; these words are then repeated in following exercises until you remember them.

As long as the student is capable of self-analysis and systematization of new information, modern language instruction attempts to produce a more civilized personality. Innovative methods are a vital part of updating the system. With this in mind, teachers can get to know their most advanced colleagues, combine them, and employ them in their work to achieve significant results. Many firms are taking multimedia capabilities to a new level when it comes to sending and receiving information. The success of the entire educational process is determined by the employment of computers and other gadgets.

To sum up, every English teacher should have a background in education and psychology. Of course, the teacher must have a solid foundation in mathematics. A thorough comprehension of mathematics, on the other hand, is recognized as a separate body of knowledge. This topic must be thoroughly understood by every English instructor. To conclude the arguments mentioned, it is important to note that English grammar should be taught in an enjoyable way to students in higher education.
