Student tourism is a burgeoning sector within the travel industry that offers young travelers the opportunity to combine academic pursuits with leisure experiences. This scientific article delves into the processes of integrating student tourism with other types of tourism to enhance the educational and cultural experiences of students. Through collaboration, experiential learning, and community engagement, the integration of student tourism with other forms of tourism can lead to a more enriching and sustainable travel experience for students.

The integration of student tourism with other types of tourism holds the potential for mutual benefits and enhanced experiences. By integrating student tourism with other types of tourism, such as cultural tourism or sustainable tourism, both industries can leverage each other's strengths and resources. This collaboration can lead to a deeper understanding and appreciation of different cultures, as well as the preservation and promotion of natural and cultural heritage. Furthermore, integrating student tourism with other types of tourism can provide opportunities for educational experiences and knowledge exchange. For example, students can learn about the history and customs of a destination through cultural tourism activities, while also engaging in eco-tourism practices to promote sustainable development and conservation efforts. By integrating student tourism with other types of tourism, destinations can attract a wider range of visitors and diversify their offerings. This can result in increased tourism revenues, job opportunities, and overall economic growth for the destination. Additionally, the integration of student tourism with other types of tourism can also contribute to the development and improvement of infrastructure in the host communities. Overall, integrating student tourism with other types of tourism has the potential to create a synergistic effect that benefits both industries and promotes sustainable development in host communities.

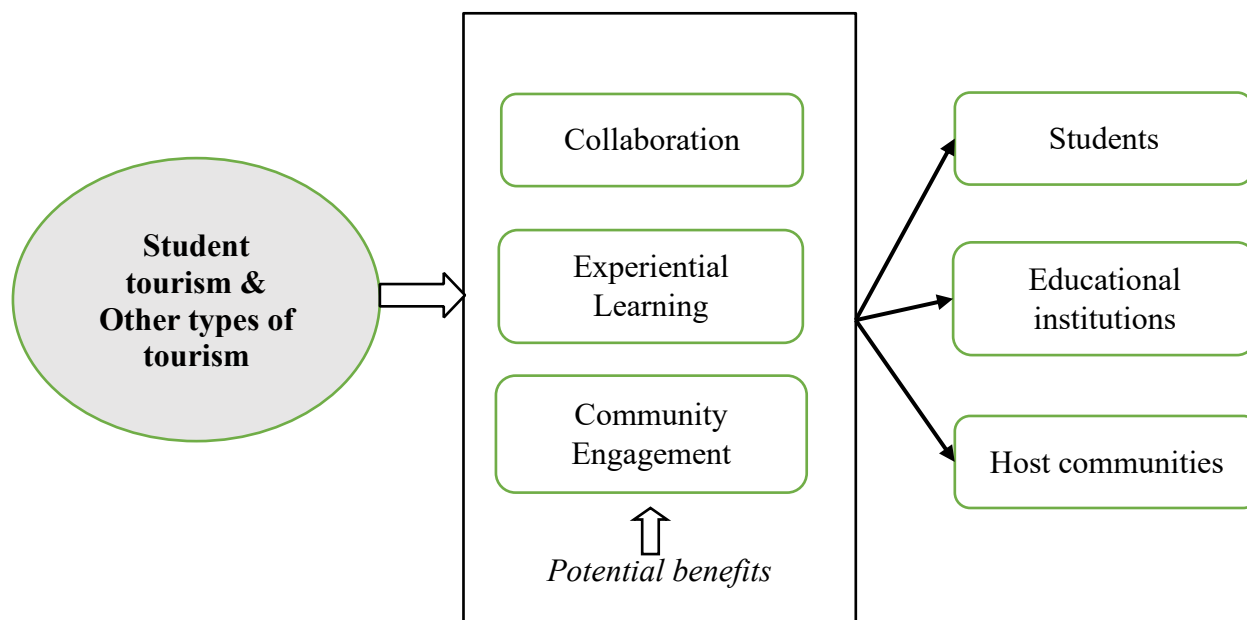

The integration of student tourism with other types of tourism can be achieved through various processes. One process is through collaboration and partnerships between educational institutions, tourism industry stakeholders, and local communities. This can involve joint planning and development of tourism programs, curriculum integration, and sharing of resources and expertise. Another process is the inclusion of student tourism activities within existing tourism offerings. For example, a cultural tour may include interactive educational experiences for students to learn about the local traditions and customs. This can be done through workshops, performances, or hands-on activities that allow students to actively participate and engage with the destination's culture.

The integration of student tourism with other types of tourism can also involve the creation of specialized educational programs and experiences specifically designed for students. These programs can be developed in collaboration with local educational institutions, tourism organizations, and community stakeholders. By incorporating educational content and objectives into tourism activities, students can gain a deeper understanding of the destination's culture, heritage, and sustainability practices. By integrating student tourism with other types of tourism, destinations can attract a wider range of visitors and diversify their offerings. This can result in increased tourism revenues, job opportunities, and overall economic growth for the destination.

Additionally, the integration of student tourism with other types of tourism can also contribute to the development and improvement of infrastructure in the host communities. This can include the construction of educational facilities, improvement of transportation systems, and enhancement of local amenities and services to cater to the needs of student tourists. Overall, the integration of student tourism with other types of tourism can create a mutually beneficial relationship that promotes

sustainable development, cultural exchange, and economic growth in the host communities.

The integration of student tourism with other types of tourism presents a unique opportunity for students to engage in experiential learning, cultural immersion, and community involvement while exploring new destinations. By combining academic objectives with leisure activities, students can gain a deeper understanding of different cultures, histories, and environments. There is a number of the potential benefits integrating student tourism with other forms of tourism for students, educational institutions, and host communities, which is described below in Picture 1.

Picture 1. The potential benefits of the integration of student tourism with other types of tourism and travel. Source: formed by the author.

Collaboration: One of the key processes in integrating student tourism with other types of tourism is collaboration between educational institutions and travel agencies. By working together, schools and tour operators can create customized itineraries that align with academic curricula and student interests. Collaborative efforts can result in tailored educational experiences that incorporate visits to historical sites, cultural exchanges, and hands-on learning activities. These partnerships can also help ensure the safety and well-being of students during their travels.

Experiential Learning: Another crucial aspect of integrating student tourism with other types of tourism is the incorporation of experiential learning opportunities. Instead of passively observing tourist attractions, students can actively engage in activities that deepen their understanding of the destination. This could include participating in workshops, volunteering at local organizations, or engaging in language immersion programs. Experiential learning not only enhances students' academic knowledge but also fosters personal growth, cultural awareness, and critical thinking skills.

Community Engagement: The integration of student tourism with other types of tourism can also benefit host communities by promoting sustainable practices and supporting local businesses. Students can contribute to community development through responsible tourism initiatives, such as staying in eco-friendly accommodations, participating in cultural exchanges, and volunteering for community projects. By engaging with local residents and businesses, students can gain a more authentic travel experience while making a positive impact on the destination.

In conclusion, the integration of student tourism with other types of tourism offers a wealth of opportunities for students to expand their horizons, deepen their knowledge, and foster cross-cultural understanding. By collaborating with educational institutions, engaging in experiential learning activities, and supporting local communities, student travelers can create meaningful and sustainable travel experiences. As the field of student tourism continues to evolve, further research and

collaboration are essential to maximize the benefits of integrating student tourism with other forms of tourism.

Student of the Faculty of Economics, Departments of Tourism of L.N.Gumilyov ENU,
Astana, Kazakhstan

Abstract. The problem studied in the article allowed us to draw the following conclusions. Based on a comprehensive study of a wide range of literary sources, the author's definition of "The development of MICE tourism in Kazakhstan, using the example of Astana city" is formulated.

MICE tourism is a set of relationships and phenomena arising from the movement and placement of people during working hours, whose main motivation is to participate in various business meetings, congresses, conferences, exhibitions, fairs and incentive events. Based on statistical data, an analysis of the current state of MICE tourism in Astana was carried out, its importance in the development of the national economy of Astana was assessed. The analysis showed that as of the end of 2023, visitors to Kazakhstan travel for business and professional purposes.

This, of course, led to the fact that the socio-economic and political development of Kazakhstan on the world stage increased the interest of foreign businessmen in the development of business relations.
