DISTANCE LEARNING: ADVANTAGES AND DISADVANTAGES

B. Khushboqov

Abstract: It's no secret who is, the covid-19 virus, which began in the province of Wuhan, the Republic of China, spread all over the world and took the sound of a pandemic. In order to maintain public health through its prevention during the epidemic, institutions of Higher Education, schools and preschool education were closed to quarantine.

Keywords: distance learning, virus, covid, education, students.

In order to ensure the continuity of education of students, the platform for distance learning (MT) was launched at Termez branch of Tashkent State Technical University named after Islam Karimov. It is natural to ask questions about what MT is and on the basis of which normative acts were established.

Automation of management of higher educational institution, introduction of information and communication technologies (ICT) in the educational process is one of the main directions of the "program of

development of higher education system in 2017-2021" approved by the president of the Republic of Uzbekistan.

According to the order of the minister of Higher and secondary special education of the Republic of Uzbekistan "on the introduction of distance education in higher education institutions" adopted on March 27, 2020, the existing higher education institutions (universities) in the Republic began work on the creation and launch of distance learning technologies.

There are many types of distance learning, and they are successfully used in the field of higher education of foreign countries where education is developed. Below we will come up with several types of distance learning.

Forum. It is a common method of communication, suitable for a wide range of training sessions (conference, praktikum, seminar, etc.). It is possible to join the optional time on muhokama as a series Serial records form. The Forum can only be in an interactive way without writing. In general, the purpose of MT is as follows:

To provide the opportunity for all students, students, those who wish to receive education in all regions and abroad at the national level to receive education in the same way;

The use of scientific and educational potentials of leading universities, academies, institutes, training centers, personnel re-training institutions, qualification institutes and other educational institutions to improve the quality of teaching evasion;

Parallel with basic education and basic work activities to provide an opportunity for further education;

To meet the need of educators for education and to expand the educational environment;

Create opportunities for continuing education.

The application of ICT in the educational process (in particular, in the process of MT) is carried out mainly in two ways. The first condition, if technical specifications, the second condition, is the availability of special software.

Technical equipment: computers, network devices, high-speed Internet networks, video conferencing equipment, etc.

The software includes: a set of programs designed for this area, ranging from software that uses existing devices.

How to set up MT in the branch: on the basis of the MOODLE platform, the necessary training materials were placed on the platform at the crossroads of faculties and Educational Directions. The instructional materials consist of curriculum and work programme of science, glossary, lecture texts, necessary materials for practical, laboratory and seminar sessions, course work and project execution procedure and assignments, calculation work execution procedure, independent work topics,

demonstration slides for better acceptance of the above information, video materials, intermediate questions for verification of acquired knowledge and test assignments etc. Good and convenient features of the above methods were used to organize MT. REFERENCES:
