NETIQUETTE OF USING INTERNET
X. Rasulov

Abstract: *Nowadays, in the world of information, the era of the Internet, the rapid development of* multi-media information technology such as Internet TV, Internet radio, email, online video, and their audience and influence are expanding.There is no need to talk too much. Such informationthe tools of the young people with a great deal of interest, and from themIsak, which is widely used, is really itit is difficult to understand the importance of the matter.

Keywords: internet, dating sites, technology, Information and communication technologies (ICT).

Today, Internet users are conditionally divided into two categoriescan be separated. The first category is based on the demand of the professionor for the purpose of obtaining information and information necessary for scientific research, while those who turn to the internet, the second category is just as interested in, say, dirt, sunbathing dating sites or playing online games. He manipulates the virtual world. Manipulation and intellectual dependenceby submitting to HimIt is no secret that now some children or teenagers are turning their Internet cafe into a second home. Observations show that online game players are predominantly alsoare adolescents. The physiological and social development of adolescence is a typical period. If boys or girls during this periodaggressive roller coaster online games, with unpleasant consequences is likely to come. Understanding human time in the virtual worldThe system is disrupted and social activity is reduced. Time in front of the computer Here's the reason for not feeling past. Consequently, today Intemet It combines the capabilities of all sectors.

Information and communication technologies (ICT) in the first place, The Internet is a factor that directly influences the upbringing of children and adolescents. At the moment 5 million young people in our country the user has their profile on social networks. Of these, 3.6 millions use their mobile phones for access. According to experts, information technology has become such an integral part of the society that it is no longer a technological

process, but rather a social process, which depends on the economic power of the State, international prestige, and the level of development of democratic institutions. Information of the society began in the 70s of the last century in the USA and in the 80s in Japan, and on the other continents began the process of realization from the 90s of last century. Introduction of ICT in all systems As a result, the intellectual potential of the society in this area is multiple.

It was well known. For example, in the US, about 75% of the information industry able-bodied population is employed. In other countries this figure is 40% The number of Internet users in some countries is less than 20-25%. The best way to ensure the security of users on the Internet the development of a culture of its use. However, today cybercrime, ideological and technical (hacking) common in the Internet world violations of the Internet culture of users non-observance It is a firm decision that young people today have a sense of spiritual awake upbringing, spirituality, spiritual purity in the mind, education, promotion progressive, effective, and effective, forward-looking pedagogical work The use of technology is a time requirement. Youth and the national and universal values ICTs play an important role in upbringing spirit. The present task of this requirement in an increasingly informative educational environment with an increasing number of listeners

To do this, it is necessary to develop and develop resources in the national segment of the Internet, to provide them with user information,

It is necessary to develop measures to ensure transparency and security, to reduce the possibility of protecting and using various external information. Upbringing a healthy and harmoniously developed generation in our country acquisition of modern knowledge and progress, their abilities and talents The necessary conditions are being created for the Growing up in the process further strengthening the legal protection of the younger generation education in the spirit of respect for national traditions and values of our people special attention is paid to the issues of the world. Their upbringing No one can deny that the influence of the media is high cannot. A distinctive feature of the process of globalization is its ideological influence can be a weapon of transfer. Today it's far and near Given the regional developments, it is still conscious aggressive forces aimed at distracting young people with no vision denying the use of the Internet for their own benefit it will not. So, the intellectual potential and spiritual immunity of young people Enhancement of information culture and media development – information.

It is not an exaggeration to say that a key factor in ensuring security is safety. Computer time, money, and health consequences for using the services and the ranks of those who are merciful are expanding. Excessive at first A healthy, curious child starts to change slowly, From the school, they

stick to the computer and stay out of it for hours remains. At first, the parents were outdoors According to her, she is less likely to sit at home after classes and in front of her parents draws. Then the mental changes in it will not coincide with adolescence Man, heedless. lonely, selfish and arrogant seems to be aiming. Unfortunately, lately it has been frustrating There are many such cases. In addition, it has become more and more popular in recent times, and it is important to raise the genre, parents, even some groups of the Ministry of the Interior are concerned. currents occur. "Death groups" in the media Such groups are often referred to as social network involving school-age children. Groups by experienced psychologists under management. Humane, legal democratic state and citizenship information and related information in the formation of society The legal regulation of the process is of particular importance. Above The reason is the popularization of foreign information websites among young people The opportunity is there. The presence of negative content on the Internet is minimal instead, youthful minds are exposed to immoral, extremist, aggressive ideas causes some arrivals, as well as some inaccurate sites

The number of Internet users in our country is growing rapidly. 2007 1 million people use the Internet every year, but that's a good indicator today ten million two hundred thousand. It is becoming a powerful ideological weapon The main users of the global network are the younger generation the vigilance and awareness of all of us, the proper use of the internet a serious threat to the morale of young people if they demand to strengthen their culture is calculated. When local sites and portals provide the necessary information If the user fails to do so, he / she should contact the foreign Internet resources natural. Unfortunately, not all foreign sources are the same fair and impartial. Let us suppose that such an independent person is fully formed data analysis, critical review, and appropriate The choice is still available, but not all Internet users they are not. Most of them are young people, students, students Along with useful information on global networks on the Internet and information that negatively affects the minds of users They are spreading the concern of the international community today.

The most widespread of these are fictitious materials and the number of such websites has increased by 4.2 million. 38% of the world's youth report violence and violence under the influence of a few more who committed suicide easy learning lessons from over 9,000 sites are learning. Conclusions and Suggestions: In recent years the ideas of terrorist organizations have been promoted more than 7,000 websites aimed at They are in the spirit of nationalism and unbiased information directed against the current system of a particular country terrorist organizations are engaged in distribution of 98% of their members odnoklassniki.ru, facebook.com, mail.ru, twitter.com, Vkontakte.ru, telegram, watsapp such as

social networking sites Uzbeks are among the most numerous nations in the world That's not good. This is when our country is gaining top ranks in the world will definitely make our rating. Internet use in youth as I said earlier We need to create a high culture of culture Countries use Internet culture as a separate discipline We need to be at least as good as we can be To be successful, our young people need to be educated The vast majority of people are examples of young people This is a popular phrase: "Our young people know the campus, the internet they know, and so on. Words, but don't you see? One child If he does something useful on the computer, he has five on his front computer baby time with junk games, clips and the like o conduct. There is also a theory focused on them Even the subtle secrets of this computer a child who has been trained and even a student who has returned to a foreign university may not be well enough. Because we cannot all use the Internet properly. Interesting ads when we use the Internet or digital networks we meet so many. A lot of experts are working on these ads Because of their interest in internet advertising, those ads got in the wrong way The main reason for this is internet schools Many do not understand the culture of use. Me too I've always been in school. But never in school textbooks or teachers understanding of the culture of using the Internet This is a sad situation. They need to be understanding in the family It 's not like that .But it doesn't even have information on the internet how parents provide information about the Internet use culture After all, not all parents are intelligent The intelligent people have to decide. Dear Mukhammad Shavkat Mirziyev There is a phrase that emphasizes: Youth is the future of our future, Attention to youth Focus on the future. Therefore, if we pay no attention to the youth today, tomorrow is tomorrow it can. Young people use the Internet today, not tomorrow The culture must be deeply ingrained in the mind, and tomorrow may be too late.
