SPORT SELECTION IS A MODERN MODEL OF FUTURE SPORTS

Komron Rashidov I. Daminov

Abstract. Sport selection is the basis for achieving results in sports. This article discusses the selection, namely selection and selection, which is a necessary tool for the development of sports. Providing expertise on ways to apply high-yielding techniques in our industry, based on the experience of developed countries and in the development of this industry.

Keywords. New world view, innovative skills, master classes, selection, sports experts, scouts, statues, genetic research and gene pool, urbanization.

Main part. Sport-competitions, sports-competition, this profession, business. In a word, it is a sphere of public policy. Distinguished President IA Karimov, too, did not deny that "Nothing can accelerate the country as fast as the sport." Indeed, in the former Soviet Union, we did not have independence or self-identity in sports like other spheres. It is not a secret that our athletes achieved some successes and achievements, despite the power and complex statehood of that time.

Albata has become a steeplefall in the latest Olympic Games on boxing, judo, freestyle wrestling and weightlifting. President of the Republic of Uzbekistan Shavkat Mirziyayev signed a decree "On measures to further develop the physical culture and mass sports". The Decree of the President of the Republic of Uzbekistan dated March 5, 2018 "On Measures to Improve the System of Public Administration in the Field of Physical Culture and Sport". Decrees and decrees have the right scale and level of development, but who can do it is citizens of the country. Being a mature cadre of our own

business, it is our main task to create innovative world outlook. When the questions are answered, the answers will change: It is a pity that we can not count on the types of sports we have mentioned above. What's the issue? What did he care about - what did we miss? Which way can we be a model of achievement for us? These questions are definitely long lasting and, of course, we have a lot of painful points. Critical approach to the issue is the best way to find the answer. As the President of the Republic of Uzbekistan Mirziyoev Sh.M. said, we must concentrate on the main issue, which is what we want, what future we are building, and in the meaning of sacrificing the words of the father of the country, to the benefit of the people through the professional devotion and devotion. The obligation of high duty lies in. From the above-mentioned resolutions and laws, we can say that our President, our state, has taken a great deal of attention and care. The main issue is the selection and selection of selection, as well as the selection of certain types of sports, as well as the fact that the sporting process is based on the capabilities and capacities of the child from the age of the child, and the process of progress is progressive, and the development of the process is progressive and ultimately successful. Not only in the future, but also in the emerging and developing countries, not only by focusing on the sport but also by exploring advanced practices and technologies: selection of gene pools and genetic experiments, scientists have identified the level of fitness and work that the human organism is even the youngest and younger. This is a marathon in sport that means the outcome of the future, in the light of this, I propose to carry out advocacy and propagation activities at the next stage.

That is, according to this:

1. First of all, it is important to study the best results in the field of sport, to attract good athletes and selectors to this field, and to send local staff to foreign research institutes for the purpose of choosing the grandmasters and various privileges to choose and share experiences. The selection should be based on honesty and integrity.

2. Based on the experience accumulated in our country (the Tashkent State Institute of Physical Culture and Sport, in the regions of the field of physical education, the organization of the research orientation of the research institute in the field of expertise of experts in the field of football by scouting of scouts on a contract basis and recruitment of highly qualified personnel under the guidance of specialists , quota allocation, the development of a specific software plan for the experiment, and the way it works.

3. Inviting foreign trainers to each country by introducing modern genetic research and gene pool research, based on the work done by leading countries in the global rating of sports and Olympic Games. Master Classes

are open championship festivals and organizational work and Conducting press conferences on the report. Establish a detailed plan and financial estimates for this work, and submit it to the highest level of approval and approval.

4. Laboratory equipments and essential equipment will be used to form a base that will respond to the perfectly meticulous requirement by using the most imported way of supplying base, clothing and handicraft equipment, and to conduct an experiment of the relevant international organizations and licensing organizations, immediate removal of existing comparative deficiencies with growing research centers. Afterwards, the independent production enterprise, after which the independent production of the factories and firms is based on the percentage of construction results.

5. Increase the level of fitness for each type of sport, including low and low-yielding Olympic sports, except for measures to address existing problems.

Example: PFL professional football league, Superliga title and test requirements and increased play demands in the league, the level of our song, especially the consent of the fans, the stadium entrance to the stadium has risen to record highs.

6. National Teams will not only be required to compete in sports on the basis of competitions and requirements, but will be tested on the basis of the types of training sessions with the national team and qualify them for testing in the international arena, of course, to the Olympic team based on the results of advanced tests. Provincial, city, republican support and financial support for the maintenance of national teams shall be based on the priority of the training camp (zoro) with the participation of the relevant local and regional organizations, with national teams, regional teams, and other national teams to share experiences and increase your level of experience. Listing in certain specific systems according to age categories of sportsmen and sports. A joint plan, a joint effort, without interfering with each other's activities.

7. Having fully assured the well-being of the material-technical base, nowadays, the attention of athletes to individual activities. Extensive work in the field of sports psychology. Not only the coach, his assistant, technical director, but also the founder of financial affairs, to be honored with the basic organizational content. Depending on the type of sport: for example, a general psychologist in football, managers, individual coaches, depending on the specialty, from the barber to the chef. Or included in individual sports turkeys. Depending on the importance of the following job vacancies, quota allocation for non-existent memberships should be increased if the experience of acceptance is increased. Reform and innovation in this

direction. Bringing the succession of the reforms back to the forefront of the industry based on advanced industry experts and consultants.

These suggestions will not necessarily cover the selection of sports and its major fields, but the only thing we know or do not know is the following:

The first is to determine the future of our sport, to identify opportunities for selection, to look for ways to achieve high results, and to advance the results of the research to the highest international rankings.

Secondly: Experience exchange, research, activity in this field, the level of our sport, our country's attention and employment of the most important people, a healthy lifestyle, the perfection of the generations, the upbringing of not only physical but spiritual, spiritual, the main reason for its detention is to restrict the root causes of such things as narcotism, religious extremism, terrorism, human trafficking and the Internet.

Thirdly, the breadth of the industry and the development of sports complexes and buildings are generally based on the material base of the technical base, such as high urbanization, slower aging, mental and physical disability, reduced disability, fitness for sports, professional level, athletes the joy and excitement of life, and the excitement of the excitement, are the reasons why the feeling of tolerance is the cause of a broader bud.

Fourthly, the high results are gradually coming to an end, as well as the subsequent discussion of people, nations, our interest in the progress of our country, respect for our sport, including hosting large and popular sports events, meeting the demands of its admiration, tourism, economic social development, When speaking of spiritual values, it is possible to see the wide spread and development of our mint.

In conclusion, I can say with certainty that it does not have to wait for the future to reach this level of achievement. Your Excellency, as the first president IA Karimov said, "If Marrani is raised, all will be what we want." These words are not in vain. Find out where to turn the power and knowledge. Then growth can be achieved, with high results. Using the above techniques in our own circumstances, connecting roots of deeper cooperation with research institutes, affiliate and partner organizations, federation associations, selecting the selection is a key solution, and if we succeed, then we will be able to take the top ten in the world in the near future.
