Abstract- *This article deals with the issues of the online process of learning in some foreign countries and how achievement they gain from online lessons and also difficulties.*

In this modern life most of the people are aware of new and innovative technology. This way, online education is becoming trend all around the globe. However this type of education did not exist before COVID-19 occurred. “(Corona virus disease(COVID-19)is an infectious disease caused by SARS-CoV-2 virus) most people who fall sick with COVID-19 will experience mild to moderate symptoms and recovery without special treatment. However, some will become seriously ill and require medical attention” (World Health Organization 23 - December 2021). This virus has taken such a terrible issue among people and it spread around all countries. After that all authorities tried to tackle the problem by doing quarantine like keeping the citizen at home. It started at the beginning of the year 2020. From this time every education from kindergarten to master moves to online education that they had to study while sitting at home. But this way has a negative and positive effect on students in learning new things. For example, it impacted differently on learners according to their majority. “Internet access ibility has resulted in an increment in the demand for online learning across the world. We know very well that online learning has managed to attract lots of attention. But many of them face some challenges of online learning such as hindrances in their comprehensive learning experience and real-time doubt solution.the advantages are getting suppressed by challenge during the process of learning. In this article, we have provided some of the challenges faced by students and professors along with the suggestion of how to overcome online learning challenges”.(November 01, 2021,from the#Embibe Exams) Due to one interview with Linda who is studying at secondary school experienced hard time while learning new languages because she said that “ I find it easier to learn any languages in person because I feel more immersed. Online there is not much connection with people that I am learning with”. From this you can understand every person has a different type of acceptance or learning style. While some researchers found that most students gave some information about challenges in learning like lack of responsibility the main reason for this, students do not near connection with their teachers and they thought we can solve the tests that will give in final education year by cheating like looking for the answers from internet. In this way they lost their duty to do home task. Second big complication is internet connection in some rural area

of countries cause some misunderstandings. And last one is online education can cause to reduce the speed of learning compared to traditional way because of given reasons by children. Then, some students suffer from looking for along time on screen in online lessons because it will be easy to distract the pupil by social media. And then, they try to find some tricky ways to not participate in the lessons like, to find some recorded videos of them. In this way they spent their golden time on unnecessary items. One most complex problem by giving a journalist “many parents are concerned about the health hazards of having their children spend so many hours staring at a screen. This increase in screen time is one of the biggest concerns and disadvantages of learning online. Sometimes students also develop bad posture and other physical problems due to staying hunched in front of a screen.”(by PRIYANKA GATAM, October 10,2020 from the#learning industry). While they experienced more a harder time they tried to gain something good for everyone. First and foremost, it helps to reduce the number of people who are infected by a virus because almost every person stayed at home and they obeyed hygiene rules. Such kind of new learning style gave big opportunity for students who do not have any knowledge about using the latest technology and after that they learned it, in order to participate the online lessons. Interestingly, most teachers say that: “ Such style is so good because we can save our time and money. The reason during the traditional education system we had to spend our time commuting the school or University sometimes it takes a lot time to go because of traffic jams. And also, nowadays we have time to take care our own family and children at home”. Most students consider that online system helps to be somehow feeling independent because, they do everything on themselves like every assignment without their teachers. They find how to do that from internet then they can find other information in this way they can increase their mental work and horizons. So that, some countries governments want to continue to teach students in a modern way and they are finding some other app how to learn efficiency.
